U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04)

1) Notice of References Cited (PTO-892)

Paper No(s)/Mail Date \_\_\_\_\_.

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. \_\_\_\_\_.

6) Other: \_\_\_\_\_

5) Notice of Informal Patent Application (PTO-152)

Application/Control Number: 09/939,865 Page 2

Art Unit: 3723

## **DETAILED ACTION**

1. In view of newly found art applied against at least some of the pending claims, prosecution has been reopened in this application.

- 2. The amendment filed July 7, 2005 has been entered.
- 3. Claims 3, 13, 21-24, 26, 32, 39-42, and 44-46 have been canceled.
- 4. Claims 47-48 have been added.
- 5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1-2, 4-5, 9-12, 14-15, 19, 29-31, 33-34, and 38 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Herold, et al. Herold et al disclose an apparatus for propelling a stream of particulate matter comprising all of the subject matter set forth in the claims above. A compressed gas source is delivered to a mixing chamber through a gas receiving port, and mixes with abrasive within the chamber, followed by discharge through a discharge conduit to strike a target material. The limitation of the particle-directing tube being "bendable" is a functional limitation which is deemed sufficiently broad to read on the discharge tube of Herold et al. While already shown as having a bend, the material in Herold et al is certainly capable of being bent. The device of Herold et al is intended for hand-held use for abrading the surfaces of a tooth located in a patients mouth, and contains a pre-charged amount of particulate

**Art Unit: 3723** 

matter. No additional particulate matter is introduced by the gas delivery conduit, thus providing a disposable apparatus upon exhaustion of the particulate matter disposed within the mixing chamber, if so desired.

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 6-8, 16-18, and 35-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herold et al in view of Dougherty. Dougherty discloses the known use of color coding of containers to identify the contents therein, and further disclose the known use of an end cap(70) for sealing the discharge end of a chamber to prevent the contents from being discharged. The use of color coding to help identify the contents of the chamber would have been obvious in view of Dougherty. Such color coding is used throughout industry for discriminating between similar looking containers, and for identifying their contents. To further provide an end cap at the distal end of the discharge conduit to prevent inadvertent discharge of the media from the chamber when not in use, would have been obvious in view of Dougherty.
- 9. Claims 20, 25, 27-28, 43, and 47-48 are allowed.
- 10. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection. Applicant's new limitation wherein "the mixing

**Art Unit: 3723** 

chamber is pre-charged with a particulate matter... and the gas delivery conduit is not conducive for replacing particulate matter" is deemed to be readable on Herold et al. Note that in Herold et al the mixing chamber holds a predetermined quantity of particulate matter, and is considered pre-charged. No additional particulate matter is supplied by the gas delivery conduit.

- 11. In view of the new grounds of rejection set forth in this Office action, this action is not being made final.
- 12. Any inquiry concerning this communication should be directed to Robert Rose at telephone number (571) 272-4494.
